

WHAT IS CLAIMED IS:

1. A standardized circuit board core, comprising:
  - a dielectric core layer having a first surface and a related second surface; and
  - a plurality of conductive posts passing through the dielectric core layer and
- 5 connecting to the first surface and the second surface of the dielectric core layer, wherein the conductive posts are arranged in one form selected from a group of array form and a constant distance form in at least one of the partial areas of the dielectric core layer.
2. The standardized circuit board core of claim 1, wherein further comprises two
- conductive layers being formed on the first surface and the second surface of the dielectric
- 10 core layer respectively.
